

National Severe Weather Warning Service

Chief Forecasters Assessment

An active frontal system, struggling to bring milder air into the south of the country, is expected to bring 20-30 mm of rainfall quite widely, and possibly as much as 50-60 mm in a few locations on high ground exposed to the strong southeasterly winds. These accumulations are expected to result in some river or surface water flooding.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **12:00 on Thu, 21st Mar 2013** until **17:00 on Fri, 22nd Mar 2013**

Persistent rain will spread into south west England during Thursday, turning heavy at times and extending further north and east on Thursday night and into Friday. Brighter, showery conditions will return from the south west later on Friday.

The public should be aware that some minor flooding impacts from rivers and surface water are expected
